

The **Testomat 2000® Fe** process photometer is an online analytical instrument for monitoring the dissolved iron (II) + (III) content in the range from 0 to 1.0 mg/l (ppm) using the photometric analysis principle.

Performance profile:

- Analysis by automatic addition of 2 reagents
- Measurement result display after a reaction time of approx. 7 minutes (measurement time without purging time)
- 2 independently programmable limit contacts for monitoring and control tasks
- Menu-guided operation and programming by means of plain text display
- High measuring accuracy due to precise piston metering pump
- Analysis trigger:
 - Automatic interval operation (interval pause adjustable from 0 - 99 minutes)
 - External control
 - Quantity-dependent via contact water meter
- Two independent limit values with hysteresis (1, 2 or 3 bad analyses) and adjustable switching functions
- Monitoring of two measuring points (switchover by external solenoid valves)
- Internal error documentation
- Programmable service address
- Programmable maintenance interval for maintenance request
